

Letter of Completion

August 31, 2026

To whom it may concern,

This letter certifies that Peter Wu completed the Apps for Good Program at Teamup during the Summer 2026 session, from June 1 to August 13, 2026.

Apps for Good is a project-based program in which students work in squads to build and ship a live software product. The Summer 2026 cohort built HORUS (horus.teamup.org), a career-intelligence web application that reads a degree program course by course, maps the skills those courses teach to the Anthropic Economic Index and the U.S. Department of Labor's O*NET framework, and classifies each skill as Automating, Transforming, or Untouched.

Peter served on the Data & Intelligence squad, in the Course Mapping pod, where he helped build the system that uses the Claude API to assign a set of skills to each course. He developed the prompt used for that classification and wrote the script that verifies the prompts behave as intended.

Over ten weeks, participants:

- Contributed code to a shared production codebase using Git, GitHub, and a pull-request review workflow.
- Worked in two-week sprints with standups, squad meetings, and a technical lead.
- Received mentorship from industry professionals across data engineering, front-end and back-end development, cloud infrastructure, quality assurance, and product design.
- Gained practical experience across the software development lifecycle, including requirements gathering, system design, implementation, testing, and deployment.
- Presented their work at Demo Day on August 13, 2026.

Peter met the program's attendance and participation requirements and contributed to a product now in public use. The technical and collaborative skills he developed here will serve his well in his future academic and professional work.

Sincerely,

Dr. David Kebo Houngninou

Founder and Program Director
Teamup
