EDUCATION

Texas A&M University

Aug 2024 – May 2027 (expected)

B.S. in Computer Science; Minors in Mathematics and in Cybersecurity

College Station, TX

GPA: 4.00/4.00 · *Completing degree in three years*

Brown Engineering Honors Program · Cyber Operations Certificate · Dean's Honor Roll

Coursework: Applied Cryptography, Software Reverse Engineering, Wireless and Mobile Systems, Cybersecurity Law, Communications and Cryptography I & II, Linear Algebra, Differential Equations, Multivariable Calculus

RESEARCH EXPERIENCE

SUCCESS Lab, Texas A&M University

May 2026 – Present

Undergraduate Researcher; advised by Dr. Guofei Gu

College Station, TX

- Researching rigorous measurement of AI agent capabilities in cybersecurity; one of four student researchers.
- Co-developing experiment infrastructure for reproducible, large-scale evaluation of AI agents.

INDUSTRY EXPERIENCE

Netvine Technologies

Jun 2026 – Jul 2026

Intern — Industrial IoT Security and Computer Vision

Nanjing, China

- Penetration tested a networked industrial camera system built for safety-critical deployments such as coal mines; identified and reported two vulnerabilities to the engineering team:
 - Unencrypted video broadcast, confirmed via Wireshark capture, exposing live feeds to passive interception.
 - Plaintext admin password in the remote force-reset command, enabling credential theft and unauthorized reset.
- Built a Python/OpenCV computer-vision tool that automatically detects camera shake in live video feeds.
- Prototyped neural-network image classifiers in PyTorch as proof-of-concept ML components.

TEACHING EXPERIENCE

Texas A&M University

Aug 2026 – Present

Undergraduate Teaching Assistant

College Station, TX

CSCE 110: Programming I (Python) and CSCE 120: Program Design and Concepts (C++)

- Lead weekly lab sections: deliver lecture reviews, run hands-on programming labs, and administer quizzes.
- Design exam questions, grade assignments, and hold twice-weekly office hours.

Independent Tutor | *Physics, Mathematics, Computer Science, SAT*

Aug 2020 – Present

- Tutored domestic and international students for six years, averaging a half-letter-grade improvement.

SELECTED PROJECTS

RSA Cryptosystem Implementation | C++, GMP

Fall 2025

- Implemented RSA key generation, encryption, and decryption from first principles with GMP big-integer arithmetic.
- Implemented Miller–Rabin primality testing for large-prime generation, with error probability below 2^{-98} .

Horus | Python, Claude API

Summer 2026

- Owned data processing, skill tagging, and LLM prompt engineering for the AI recommendation engine of a 33-member team's web app on AI's impact across fields of study.

Hack Computer | HDL, Hack Assembly

Summer 2025

- Built a complete computer from NAND gates upward (multiplexers, ALU, RAM) and programmed it in assembly.

SKILLS

Security: Ghidra (reverse engineering), Wireshark (traffic analysis), penetration testing, applied cryptography

ML & Vision: PyTorch, OpenCV, LLM APIs and prompt engineering

Programming: Python, C++, Java, JavaScript (React, Node.js, Express), SQL (PostgreSQL), R, Scheme, HDL

Systems & Tools: Linux (Ubuntu), Git, Google Cloud, Vercel, Railway, ~~FF~~X

Languages: English (native), Mandarin Chinese (conversational)
