Objective

Sophomore with senior classification, currently enrolled in junior-level coursework, seeking a Summer 2026 internship. Combines the long-term growth potential and adaptability of a sophomore with the advanced knowledge, flexibility, and academic experience of an upperclassman. Prepared to contribute quickly, take on challenging projects, and grow within a professional environment.

Education

Texas A&M | College Station, TX

BS in Computer Science, Math and Cyber Security minor, GPA (4.0)

Honors: Brown Engineering Honors program, TAMU Dean's Honor roll

August 2024 – Present

Expected Graduation, May 2027

Relevant Coursework

Computer Science: Discrete Mathematics, Data Structures and Algorithms, Computer Organization, Foundations of Software Engineering, Design and Analysis of Algorithms, Intro to Computer Systems

Math: Linear Algebra, Differential Equations, Applied Cryptography, Calculus 3

Skills

Programming: Java, Python, C++, Scheme, HDL, LaTeX, hack assembly

Platforms: Linux (Ubuntu), Git, GitHub, Putty, Dr. Racket, JFlap, Google Cloud VM

Professional Organizations: Aggie Coding Club, Aggie competitive coding club

Communication: Design proposals, technical reports, instruction manuals, presentations (large and small audiences)

Languages: English (native), Chinese (conversational)

Experience

Light and Salt Association

May 2020 – May 2024

Regional Intern

- Planned, organized, and led a team of over 40 youth in providing homeless support, impacting over 1500 homeless through a project called hope bags. Worked with local organizations NHCCW and Compassion United to pack and distribute care packages to the homeless at an event called "Breakfast in the Park".

Independent Tutor

August 2020 – Present

Physics/Math/Computer Science/SAT

- Tutored both international and domestic students, averaging a half a letter grade improvement through consistent biweekly meetings and interactive learning.

Guided Research

May 2025 – Present

- Participated in Guided Research with Professor Anxiao Jiang where we explore applications of generative AI on various fields such as analog error codes and data compression.

Projects

Chess game

Fall 2024

Team / Python

- Created a Python program with an assigned team that implements a chess game with move validation and visuals using a Waterfall development process. *Focusing on a bottom up approach allowed us to better split and manage the workload.*

Hack Computer

Summer 2025

Individual / HDL

- Designed a simple HACK computer using HDL starting from only Nand gates and building up each individual part, like Muxs, ALUs, d-flipflops, and RAM concurrently learned its corresponding assembly

Battleship AI

Spring 2025

Individual / Java

- Created a Java program that uses density maps and search algorithms to calculate the optimal move for the game battleship

Leadership

Computer Science and Science UIL

August 2023 – May 2024

Captain/Competitor: led practice and study sessions in order to best compete in UIL competitions

EPIC Ministries

August 2025 – Present

Leader: led a small group and helped organize various events with a budget of 330\$ each.
